NOTE: The elevations at edge of taper from BEGIN TAPER to POINT 'M' are established by a constant 3% slope across the appropriate taper widths based on the Taper Ratio of 15:1. Drop = (0.03) x (Offset).

#### GENERAL NOTES:

This detail sheet shows loop alignment and grade data for the loop exit pavement.

Loop exit pavement shall be the same thickness as the mainline pavement. Loop exit subbase for both HMA and P.C.C. pavement shall be the same thickness as the mainline subbase.

Loop exit pavement area shown by shaded area is 1743 square yards..

In order to assure proper drainage, any special shaping of exit area between lines A and B shall be accomplished by methods approved by the Engineer.

Refer to Detail Sheet 550-6 for jointing layout.

Refer to typical cross sections and appropriate Standard Road Plans for design details and requirements for shoulders.

- For header construction details at the beginning of taper, refer to the appropriate Typical 7101 or 7102.
- Refer to detail project plans for loop alignment, profile grade and superelevation data. Equate Point 'M' (Loop Stationing) to Point 'C' (Mainline Stationing).
- The loop pavement cross slope between point (K) and point (M) is determined by superelevation rotated about line C. Refer to Standard Road Plan RP-3 and detail project plans for superelevation transition requirements.

This design is based on 60 mph design speed at e max = 6%.

For location equivalent stations see Tabulation 101-15
